

# How to Use All 3 Custom Scripts Together on the 3-Minute Chart for Gap-Up Plays

## Overview

You're working with three unique scripts designed to detect volume-based breakout plays. Here's how to use them together effectively:

1. **Mando's Breakout Alert** – Detects trend changes, support/resistance zones, and breakout conditions based on delta volume and price structure.
2. **Combined Volume Indicators** – Highlights early session dollar volume surges and shows delta volume percentage.
3. **Rocket Alert** – Confirms explosive moves with institutional-level volume and strong delta volume conditions.

## Objective

Catch high-probability breakout plays, especially gap-ups, in the early hours of the trading session using volume confirmation, trend direction, and structure validation.

## Step-by-Step Strategy

### Step 1: Use Script #2 – *Combined Volume Indicators*

- Focus on the first 35 minutes after the market opens.
- Watch for a yellow “BV” label (Big Volume).
- Confirm dollar volume is above your threshold (default is \$5 million).
- Look for delta volume percentage labels above 20% (ideally over 30%).
- This tells you the gap-up is supported by real money and buying pressure.

### Step 2: Use Script #1 – *Mando's Breakout Alert*

- Watch for a green VIDYA line and ▲ trend flip signals.
- Liquidity zones (support/resistance) will be drawn on the chart.
- A breakout signal (orange label) appears when:
  - Delta volume is > 45% for two candles.
  - Price closes above the Lorentzian line for two candles.
  - Lorentzian is above VIDYA.
- Best entry: after the orange breakout label fires, wait for a pullback and bounce off the green VIDYA line or the most recent liquidity support zone.

### Step 3: Use Script #3 – *Rocket Alert*

- Focus on the first 2.5 hours of the session.
- Wait for a 🚀 rocket label to appear, which signals:
  - Dollar volume is 2200%+ above the 300-candle EMA.
  - Delta volume is > 65% for two consecutive candles.
  - Price is trending up based on the VIDYA trend logic.
- This confirms strong institutional interest and adds conviction to your trade.

### Entry Checklist

Use this checklist to confirm your entry:

- Gap-up with high dollar volume in the first 35 minutes (Script #2).
- Delta volume percentage above 20% (Script #2).
- ▲ Trend flips up and a breakout label appears (Script #1).
- Price bounces off VIDYA or a support line after breakout (Script #1).
- Rocket signal appears (Script #3).

### Entry, Stop, and Exit Plan

- **Entry:** On the bounce off VIDYA/support line after breakout confirmation.
- **Stop:** Below the green VIDYA or most recent liquidity support zone.
- **Target:** 1.5R to 2R, or next resistance liquidity line.

### Alerts to Enable

- “Buy the Breakout” (from Script #1)
- “Big Volume Alert” (from Script #2)
- “Rocket Alert” (from Script #3)
- **Final Notes**

This system filters for high-quality gap-up plays by combining:

- Volume confirmation (Script #2),
- Trend and structure analysis (Script #1),
- Explosive breakout confirmation (Script #3).
